Note. Positions and outlines of all important buildings insured are drawn from careful tape-line measurement. Outside property, fences, and water courses are often located by pacing. Fires are sometimes drawn slightly out from their exact location, in order to show their course more clearly. The scale of drawing is liable to become somewhat distorted in the process of lith-graphing, but the extent of this is shown by the ⊥ register marks at the corners, which, on the original, are 20 × 20 inches apart, and coincide with the border line.
