**EXPLANATION**

This map shows the location and identification number of drainage basins in Connecticut. It is intended to serve as a regional guide for drainage basin delineation and to help in identifying drainage basins, subregional basins, and subregional basins. A four digit identification number is used to permit correlation of basin numbers. Each basin has an arrow indicating the outlet or outlet point. The outlet on the left gives the identification number, name, and local upstream drainage area for each basin.

The map was made by delineating drainage basins on 1:50,000 scale quadrangle maps using 10 foot contour intervals. Only limited field data has been used. Main trunk channels for water supply, storm drainage, etc., have not been shown. The map was prepared from aerial photographs and ground truth data. The map was compiled from the Connecticut State Geologist's office files. The map was compiled from the Connecticut State Geologist's office files. The map was compiled from the Connecticut State Geologist's office files.

The four digit numbering system codes a drainage basin by its Major (1st digit), Regional (2nd digit), and Subregional (3rd and 4th digits) in descending order.

**SYMBOLS**

- drainage divide between MAJOR basins
- drainage divide between REGIONAL basins
- drainage divide between SUBREGIONAL basins
- location of basin outlet and generalized direction of flow at outlet point
- approximate location of watershed based on data
