

UConn HEALTH

Name: Daria M Biancardi | DOB: 2/27/1972 | MRN: T00343954 | PCP: VELLA, PAUL M, MD

Letter Details

UConn HEALTH

August 23, 2021

Patient: **Daria Biancardi**

Date of Birth: **2/27/1972**

Date of Visit: **8/23/2021**

To Whom It May Concern:

It is my medical opinion that Daria Biancardi be allowed to keep her pool and deck intact to continue to provide physical and emotional support for her diagnosis of Multiple Sclerosis. Daria's diagnosis of MS in 2004 is a non curable, progressive disease that can lead to severe disability mentally and physically if not proactive with treatment. The activity of swimming is very therapeutic to Daria, to decrease and limit current physical limitations and is often an adjunct to physical therapy and mentally to release stress and tension. Swimming assists in preventing muscle stiffness and rigidity, promotes joint health and is considered a great source of exercise to maintain overall good health. Removal of this pool would set the patient back in her progress to maintain her current strength and mental well being.

The deck that supports the pool is a safety measure for the patient to safely and easily enter and exit the pool and should also remain intact to prevent injury.

If you have any questions or concerns, please don't hesitate to call.

Sincerely,

Karen Nelson, RN MSN
