## Health Department

# Memo

January 12, 2021

**To:** Richard J. Johnson  
Town Manager

**Fr:** Wendy S. Mis *WSM*  
Director of Health

**Re:** COVID-19 update

Numbers in (parentheses) indicate change from previous week.

As per CT Department of Public Health (CT DPH) lab testing data available 1/8/2022:

- 30,846 residents have been tested for COVID-19 (+384)
- Of the 30,846 residents tested, 3,979 (+370) have laboratory confirmed positive and probable cases of COVID-19
- By gender, a total of 2,059 female (+193) and 1,920 male (+177) positive cases have been reported.
- COVID-19 associated deaths are recorded using information from the Office of the Chief Medical Examiner. No deaths were recorded this period, leaving the loss of Glastonbury residents at 112 (+0).

The graph below shows a count of residents with confirmed positive and probable cases and COVID-19 associated deaths in approximate one-month timeframes beginning in March 2020. *Notes: COVID-19 deaths are depicted on a secondary Y axis with a separate (right hand) scale. The last column represents data from 1/2/22 – 1/8/22.*

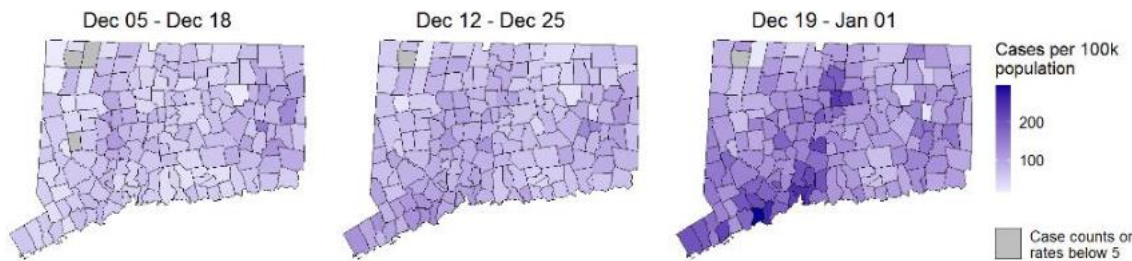

CT DPH's COVID-19 Town Alert System map, updated weekly, shows positive cases per 100,000 population using a 14 day average. Using a color coded system of grey (<5 cases), yellow (5 – 9 cases), orange (10 – 14 cases), and red (15 or more cases), viewers can understand at a glance the occurrence of cases statewide. Only cases among persons living in community settings are included in this map; the map does not include cases among people who reside in nursing home, assisted living, or correctional facilities.

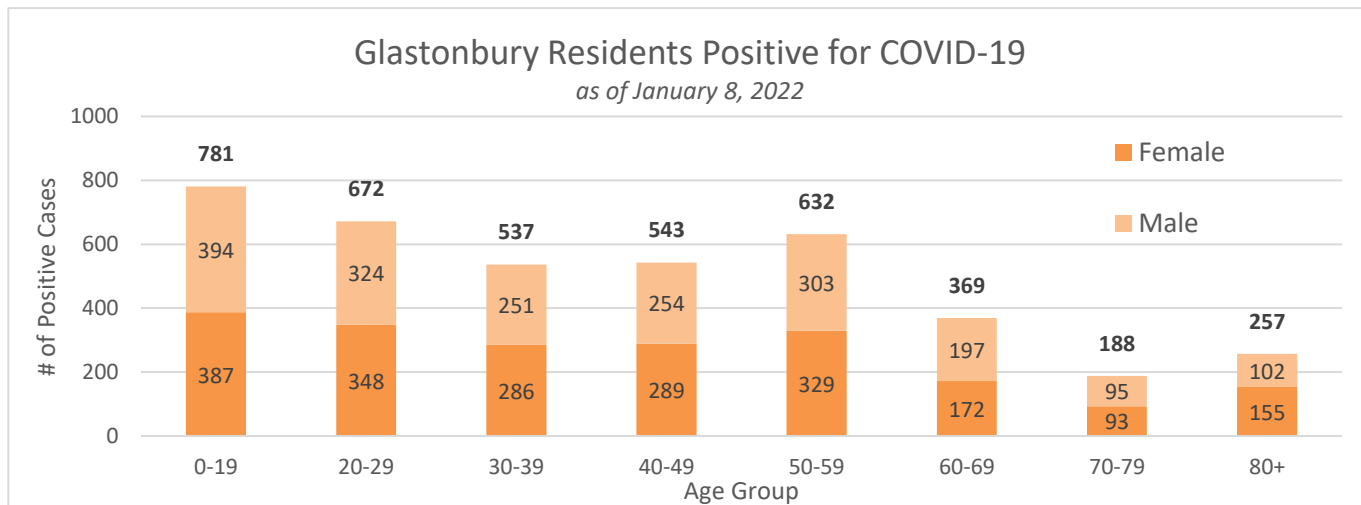

- Glastonbury is currently shown in red at 112.3 reported cases per 100,000 (+52.2).
- The most recently updated map, dated January 6, shows 168 (+0) cities and towns have 15 or more cases per 100,000 population.

The graphic below shows the average number of new cases per 100,000 population per day. Darker colors indicate towns with higher rates. Towns in grey have fewer than than 5 cases per 100,000 population per day. New cases in nursing homes, assisted living or correctional facilities are not included.

The cumulative number of Glastonbury cases by age group and gender is shown in the chart below.

**Glastonbury vaccination status:**

The percent of partially and fully vaccinated Glastonbury residents increases weekly. Data from 1/5/22 (below) shows the percent of all fully vaccinated Glastonbury residents who are eligible for vaccination (aged 5 and over) is 80.90%.

Age group (yrs)	Percent fully vaccinated*
5 - 11	40.57
12 - 17	79.16
18 - 24	95.68
25 - 44	87.97
45 - 64	82.03
65+	100
<b>Average of fully vaccinated Glastonbury residents (5 years of age and over)</b>	<b>80.90</b>

\*Fully vaccinated is 2 weeks after the last shot in the vaccination series

**COVID-19 Testing locations**

2-1-1 of Connecticut has an online site to search for COVID-19 testing. Users may refine their search by zip code, type of test and key demographics of individual to be tested.

[http://www.211ct.org/search?page=1&location=06033&taxonomy\\_code=11048&service\\_area=glastonbury](http://www.211ct.org/search?page=1&location=06033&taxonomy_code=11048&service_area=glastonbury)

*Data from DPH is considered preliminary. Test results may be reported several days after the result. Data are incomplete for the most recent days. Data from previous dates are routinely updated. In an ongoing process of data assessment, DPH continues to modify how certain disease-positive lab results are considered, changing some previous counts. Probable cases of COVID-19 include persons with positive antigen results. Positive cases include molecular and antigen tests. Prior to June 1, 2020, probable and confirmed cases were reported together.<sup>1</sup>*
