

Town of Glastonbury

2155 MAIN STREET • P.O. BOX 6523 • GLASTONBURY, CT 06033-6523 • (860) 652-7500 FAX (860) 652-7505

ITEM #7 05-24-2022 Meeting

Richard J. Johnson Town Manager

May 20, 2022

The Glastonbury Town Council 2155 Main Street Glastonbury, CT 06033

Re: Town Manager's Report

Dear Council Members:

The following will keep you up to date on various topics.

1. COVID-19 Report/Protocols

Attached is a copy of the most recent weekly report. Glastonbury totaled 30 and 31.5 for the weekly report of April 28th and May 5th. The report for May 12th shows Glastonbury at 45.8.

2. Memorial Day Parade and Ceremony

The annual Memorial Day Parade steps off at 9:00 a.m. on Monday, May 30th from the corner of Main and Welles Street. The parade is followed by the memorial ceremony at the Hubbard Green.

3. Splash Pad

A ribbon cutting for the new splash pad at Addison Pool is scheduled for 5:30 p.m. on Monday, June 6th.

4. Senior Picnic

Parks and Recreation is holding the Senior Citizens Picnic at the RCC on Thursday August 11th from 9:30 a.m. to 2:30 p.m. with lunch served at 11:45 a.m. Program will also include a set-back tournament, music and bingo.

5. Expense Report

A copy of my expense report for the three months January through March 2022 was forwarded separately. I will appreciate Council recognizing receipt of this report on Tuesday evening.

6. Public Information Hearing

A reminder State DOT has scheduled a public information hearing by zoom for 7:00 p.m. on Monday, June 13th. This concerns the proposed roundabout for the realigned entrance and exit ramps to Route 17 near the former Glastonbury Funeral Home along New London Turnpike.

Richard J. Johnson

Town Manager

Sincerely

Memo

May 17, 2022

To: Richard J. Johnson

Town Manager

Fr: Wendy S. Mis WSM

Director of Health

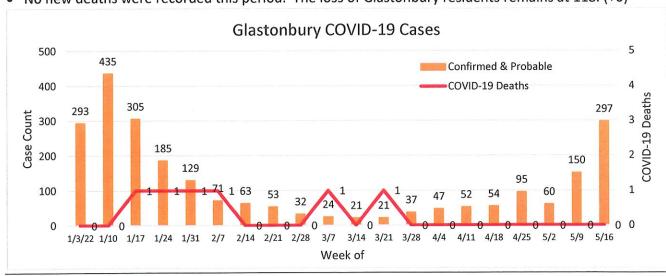

Re: COVID-19 update

This COVID-19 update uses publicly available data from CT Department of Public Health. Case data is collected each Monday, and vaccination and map data is reported from their most recent posting date. This report includes data from January 3, 2022 to May 17, 2022, and is not directly comparable to reports dated January 20, 2022 or earlier. The graph below shows a weekly count of residents with confirmed and probable cases and COVID-19 associated deaths. COVID-19 deaths are depicted on a secondary Y axis with a separate (right hand) scale.

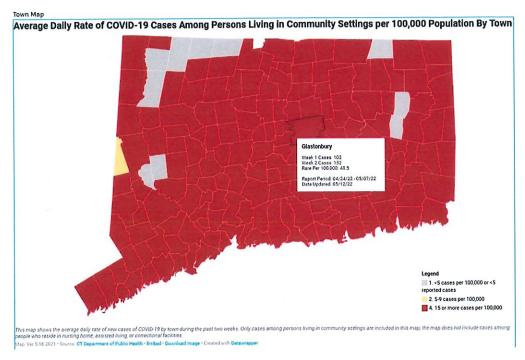

Numbers in (parentheses) indicate change from the previous week.

As per CT Department of Public Health (CT DPH) data collected 5/17/2022:

- A total of 123,450 tests for COVID-19 have been administered to Glastonbury residents. (+3,145)
- Of the 123,450 tests conducted, 5,755 are laboratory confirmed positive and probable cases of COVID-19. (+297)
- No new deaths were recorded this period. The loss of Glastonbury residents remains at 118. (+0)

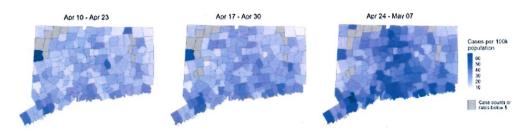

CT DPH's COVID-19 Town Alert System map, updated weekly, shows the average daily rate of new cases of COVID-19 during the past two weeks. Using a color-coded system of grey (<5 cases), yellow (5 - 9 cases), orange (10 - 14 cases), and red (15 or more cases), viewers can understand at a glance the occurrence of cases statewide. Only cases among persons living in community settings are included in this map; the map does not include cases among people who reside in nursing home, assisted living, or correctional facilities.

- Glastonbury is currently shown in red at 48.5 cases per 100,000 population (+17).
- The most recently updated map, dated May 12, shows 158 (+13) cities and towns have 15 or more cases per 100,000 population.

The graphic below shows the average number of new cases per 100,000 population per day. Darker colors indicate towns with higher rates. Towns in grey have fewer than 5 cases per 100,000 population per day. New cases in nursing homes, assisted living or correctional facilities are not included.

Glastonbury vaccination status:

State data from 5/11/22 (below) shows the percent of all fully vaccinated Glastonbury residents who are eligible for vaccination (aged 5 and over) is more than 86%. The percent of residents who have received an additional dose of vaccine is approaching 65%. $\nabla NOTE$: On May 17, FDA authorized a COVID-19 booster for children age 5 through 11 years. Previously, only children with certain medical conditions or who take medicines that weaken the immune system were eligible in this age range. Data in the chart reflects only children eligible for a booster prior to 5/17/22.

Age group (yrs)	Percent fully vaccinated*	Percent additional dose received
5 - 11	57.03	0.39
12 - 17	83.82	45.76
18 - 24	100	63.56
25 - 44	92.35	59.52
45 - 64	84.42	64.93
65+	100	90.18
Average of Glastonbury residents with full vaccination (5 years of	86.27	64.79∇
age and over) and additional doses received (12 years and over).		

^{*}Fully vaccinated is 2 weeks after the last shot in the vaccination series

Vaccination and booster doses

On May 17, FDA authorized a COVID-19 booster for children ages 5 – 11. Booster clinics for children in this age group are expected to roll out soon.

Those people eligible can receive a **booster** shot after they have completed their primary COVID-19 vaccination series. Adults ages 50 years and older, people ages 12 years and older who are moderately or severely immunocompromised, and people who received 2 doses (1 primary and 1 booster) of Johnson and Johnson's Janssen vaccine are eligible to get a **second booster**.

People seeking COVID-19 vaccination or booster shots can go to www.vaccines.gov and enter the zip code of the area they are searching.

COVID-19 testing locations and at home test kits

2-1-1 of Connecticut has an online site to search for COVID-19 testing locations. Users may refine their search by zip code, type of test and key demographics of individual to be tested. A search of the Glastonbury area can be found by **clicking here**.

Every home in the U.S. is now eligible to order four sets of two (2) free at-home COVID-19 tests, for a total of 8 rapid antigen tests. Even if you have previously ordered the first or second round of test kits, you can now order a third round of kits. The tests are completely free and packages ship for free. Kits can be ordered at https://www.covidtests.gov/

If you have difficulty accessing the internet or need additional support, call 1-800-232-0233 (TTY 1-888-720-7489) to get help in English and more than 150 other languages, 8am to midnight, 7 days a week.

The Disability Information and Access Line (DIAL) is also available to specifically help people with disabilities place their orders. To get help, call 1-888-677-1199, Monday-Friday from 9AM to 8PM, or email **DIAL@usaginganddisability.org**.

 $[\]nabla$ The additional dose data for 5 – 11 year olds is not included in the average of Glastonbury residents who have received their additional or booster dose.

NOTE: The FDA allows an *extended expiration date for certain COVID-19 Home Antigen Tests* beyond the expiration date on their box. Kits that have received FDA approval for extended authorization can be found by **clicking here**.

**Please note: Glastonbury, like other locations in Connecticut and nationally, continues to see an increase in seasonal flu cases. Flu symptoms can appear to be similar to COVID-19 symptoms. If you feel ill, but test negative for a COVID-19 test, you may have the flu. Please stay home if you don't feel well, even if you test negative for COVID-19. Respiratory viruses such as COVID-19 and seasonal flu spread easily, so remember to wash your hands well with soap and water, cover your mouth when you cough or sneeze, and avoid touching your eyes, nose and mouth. More information about seasonal flu can be found by clicking here.

Data from DPH is considered preliminary. Test results may be reported several days after the result. Data are incomplete for the most recent days. Data from previous dates are routinely updated. In an ongoing process of data assessment, DPH continues to modify how certain disease-positive lab results are considered, changing some previous counts. Probable cases of COVID-19 include persons with positive antigen results. Positive cases include molecular and antigen tests. Prior to June 1, 2020, probable and confirmed cases were reported together.¹
