

Town of Glastonbury

Health Department

Memo

June 1, 2022

To: Richard J. Johnson
Town Manager

Fr: Wendy S. Mis *WSM*
Director of Health

Re: COVID-19 update

This COVID-19 update uses publicly available data available from CT Department of Public Health. This report includes data from January 3, 2022 to May 31, 2022, and is not directly comparable to reports dated January 20, 2022 or earlier. DPH data was not available for Monday, May 30, due to the Memorial Day holiday, so data from 5/31 is used in this report. The graph below shows a weekly count of residents with confirmed and probable cases and COVID-19 associated deaths. COVID-19 deaths are depicted on a secondary Y axis with a separate (right hand) scale.

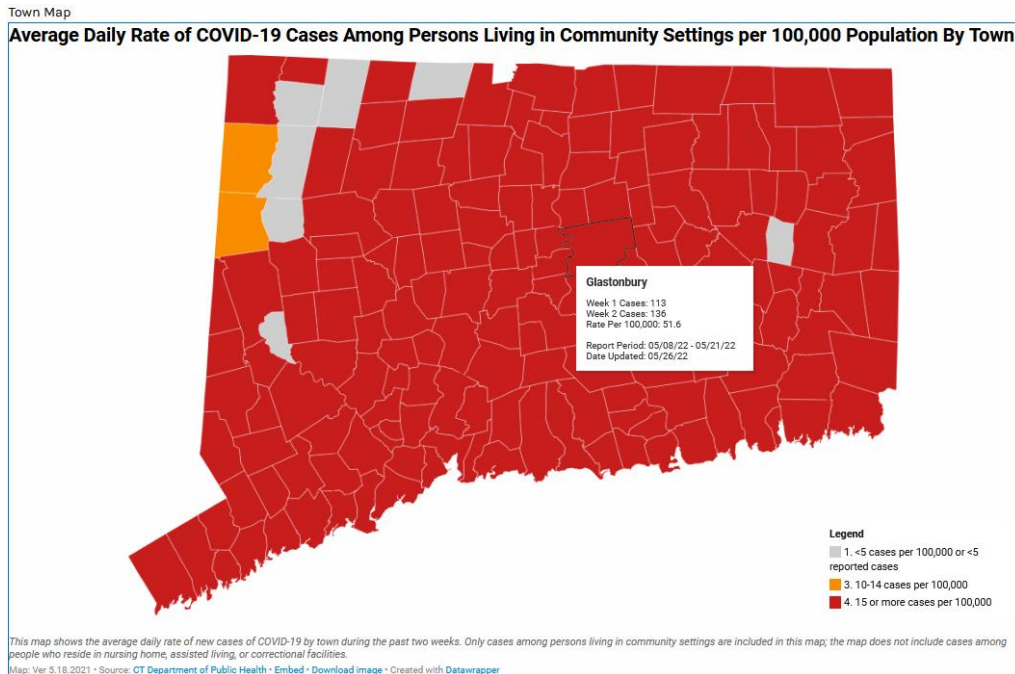

Numbers in (parentheses) indicate change from the previous week.

As per CT Department of Public Health (CT DPH) data collected 6/1/2022:

- A total of 124,931 tests for COVID-19 have been administered to Glastonbury residents. (+697)
- Of the 124,931 tests conducted, 5,983 are laboratory confirmed positive and probable cases of COVID-19. (+96)
- No additional deaths were recorded this period; the loss of Glastonbury residents remains at 118. (+0)

CT DPH's COVID-19 Town Alert System map, updated weekly, shows positive cases per 100,000 population using a 14 day average. Using a color coded system of grey (<5 cases), yellow (5 – 9 cases), orange (10 – 14 cases), and red (15 or more cases), viewers can understand at a glance the occurrence of cases statewide. Only cases among persons living in community settings are included in this map; the map does not include cases among people who reside in nursing home, assisted living, or correctional facilities.

- Glastonbury is currently shown in red at 51.6 reported cases per 100,000 (+0.6).
- The most recently updated map, dated May 26, shows 159 (-3) cities and towns have 15 or more cases per 100,000 population.

The graphic below shows the average number of new cases per 100,000 population per day. Darker colors indicate towns with higher rates. Towns in grey have fewer than 5 cases per 100,000 population per day. New cases in nursing homes, assisted living or correctional facilities are not included.

Glastonbury vaccination status:

The percent of vaccinated and boosted Glastonbury residents increases weekly. State data from 5/25/22 (below) shows the percent of all fully vaccinated Glastonbury residents who are eligible for vaccination (aged 5 and over) is over 86%. The percent of residents who have received an additional dose of vaccine is over 65%. ∇NOTE: A third primary series dose is recommended for children age 5 through 11 years who have certain medical conditions or take medicines that weaken the immune system. Data in the chart reflects only children eligible for a booster prior to 5/17/22.

Age group (yrs)	Percent fully vaccinated*	Percent additional dose received
5 - 11	57.33	1.25
12 - 17	83.82	46.64
18 - 24	100	63.9
25 - 44	92.42	59.94
45 - 64	84.39	65.17
65+	100	90.44
Average of Glastonbury residents with full vaccination (5 years of age and over) and additional doses received (12 years and over).	86.33	65.22 ∇

*Fully vaccinated is 2 weeks after the last shot in the vaccination series

∇ The additional dose data for 5 – 11 year olds is not included in the average of Glastonbury residents who have received their additional or booster dose.

COVID-19 Testing locations

2-1-1 of Connecticut has an online site to search for COVID-19 testing. Users may refine their search by zip code, type of test and key demographics of individual to be tested.

http://www.211ct.org/search?page=1&location=06033&taxonomy_code=11048&service_area=glastonbury

COVID-19 at-home test kits

Every home in the U.S. is eligible to order four (4) free at-home COVID-19 tests. The tests are completely free. Orders will usually ship in 7-12 days. Tests can be ordered at <https://www.covidtests.gov/>

COVID-19 vaccination and booster clinics

People seeking COVID-19 vaccination or booster shots can go to www.vaccines.gov and enter the zip code of the area they are searching.

Data from DPH is considered preliminary. Test results may be reported several days after the result. Data are incomplete for the most recent days. Data from previous dates are routinely updated. In an ongoing process of data assessment, DPH continues to modify how certain disease-positive lab results are considered, changing some previous counts. Probable cases of COVID-19 include persons with positive antigen results. Positive cases include molecular and antigen tests. Prior to June 1, 2020, probable and confirmed cases were reported together.¹
