

Town of Glastonbury

Health Department

Memo

March 21, 2023

To: Richard J. Johnson
Town Manager

Fr: Wendy S. Mis *WSM*
Director of Health

Re: COVID-19 update

This report uses publicly available laboratory-confirmed results for COVID-19 data from Connecticut Department of Public Health (CT DPH) for local, county, and Connecticut overall. At-home test results are not included, so information and graphs demonstrate trends rather than a full accounting of cases. Numbers in (parentheses) indicate change from the previous week. The chart directly below shows data in approximate one-month intervals.

As per CT DPH data up to March 21, 2023:

- A total of 137,389 tests have been administered to Glastonbury residents. (+76)
- Of the 137,389 tests administered, 7,903 were laboratory positive NAAT cases. (+5)
- One additional death has been recorded. The loss of Glastonbury residents increases to 129. (+1)

Test positivity is calculated as a rolling 7-day test positivity by specimen collection date; all positive molecular (PCR/NAAT) test results are divided by all molecular (PCR/NAAT) test results (positive and negative) for the last 7 days and multiplied by 100 to reach a percentage. Results are shown below for Glastonbury, Hartford County, and the state of Connecticut overall.

*Please note that this week’s data for Connecticut, Hartford County and Glastonbury is from March 17, the last date for which Glastonbury-specific seven-day positivity data is available.

Seven-day test positivity declined sharply for Glastonbury (4.6%), bringing the 7-day test positivity rate close to Hartford County (4.0%) and Connecticut overall (4.2%).

COVID-19 Vaccine

COVID-19 vaccines are available for individuals ages 6 months and up.

The COVID-19 bivalent booster vaccine is available if it has been at least two months since an individual’s last COVID-19 vaccine (whether the primary series or any booster). More [vaccination and booster information](#) is available from the Centers for Disease Control and Prevention.

Additional clinics can be found at www.vaccines.gov and entering the zip code for the search area.

Free at home COVID-19 test kits; extended shelf life of test kits

The U.S. government still has at home test kits available to residential households for no cost. An order includes four (4) individual rapid antigen COVID-19 tests. The tests are completely free. Tests are currently available and can be ordered at <https://special.usps.com/testkits>.

The expiration dates of many at home test kits have been extended. Go to [this website](#) to check the updated expiration date of kits in your home.

COVID-19 Testing locations

CLICK HERE for the 2-1-1 of Connecticut online site to search for COVID-19 testing. Users may refine their search by zip code, type of test and key demographics of individual to be tested.

Respiratory illness

Two basic types of influenza virus circulate in the U.S., flu group A and flu group B. A typical flu season starts with Flu A infections, followed by a second wave of Flu B infections. The first wave (Flu A) has peaked, and it appears we might not see the second wave (Flu B) this year. CT DPH statewide data indicates the percentage of Emergency Department visits for influenza like illness is holding steady, with small weekly fluctuations. Flu season continues for at least several more weeks, and **prevention strategies against respiratory viruses** are still recommended.

Source: [CT DPH](#)

Flu shots remain available in the community. Pharmacies and other locations providing flu shots as well as the vaccines available can be found at www.vaccines.gov.

While COVID-19, seasonal flu, and RSV may be addressed with slightly different medical treatments, **prevention strategies against respiratory viruses** are similar:

- Wash your hands often
- Clean and disinfect surfaces regularly
- Get your flu vaccine and COVID-19 booster
- Stay home when you are sick
- Wear a mask in crowded public areas, or near others who may be sick
- Wear a mask around others when you have respiratory illness symptoms

Data for this report is gathered from publicly available data at <https://data.ct.gov/stories/s/COVID-19-data/wa3q-tfvc/>. Test positivity is calculated as a rolling 7-day test positivity by specimen collection date; all positive molecular (PCR/NAAT) test results are divided by all molecular (PCR/NAAT) test results (positive and negative) for the last 7 days and multiplied by 100 to reach a percentage. All data are preliminary and subject to change. Data from previous dates are routinely updated. CT DPH data reporting changes have been summarized and can be read [here](#).
