Health Department

Memo

April 25, 2023

To: Jonathan Luiz
Town Manager

Fr: Wendy S. Mis *WSM*
Director of Health

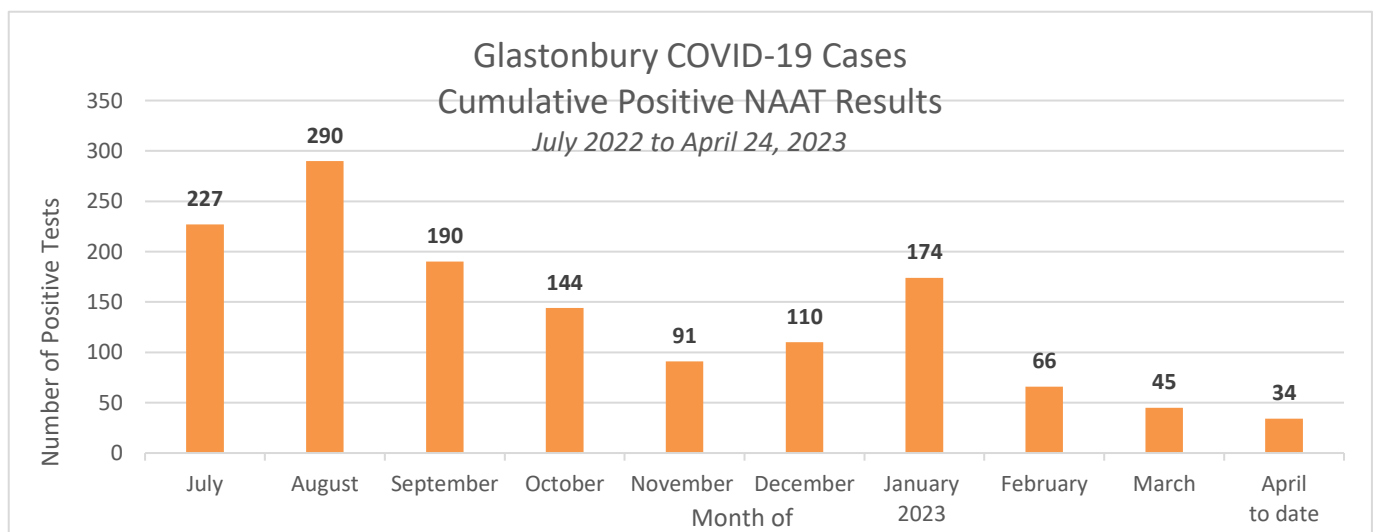

Re: COVID-19 update

President Biden officially ended the national public health emergency April 10, 2023. The Federal Public Health Emergency Declaration for COVID-19 is scheduled to end May 11, 2023. As such, Glastonbury's final weekly COVID-19 report will be issued the week of May 15, using the Connecticut Department of Public Health data from May 11, 2023.

This report uses publicly available laboratory-confirmed results for COVID-19 data from Connecticut Department of Public Health (CT DPH) for local, county, and Connecticut overall. At-home test results are not included, so information and graphs demonstrate trends rather than a full accounting of cases. Numbers in (parentheses) indicate change from the previous week. The chart directly below shows data in approximate one-month intervals.

As per CT DPH data for April 14, 2023:

- A total of 138,003 tests have been administered to Glastonbury residents. (+120)
- Of the 138,003 tests administered, 7,943 were laboratory positive NAAT cases. (+7)
- No new deaths were recorded this week. The loss of Glastonbury residents holds at 130. (+0)

Test positivity is calculated as a rolling 7-day test positivity by specimen collection date; all positive molecular (PCR/NAAT) test results are divided by all molecular (PCR/NAAT) test results (positive and negative) for the last 7 days and multiplied by 100 to reach a percentage. Results are shown below for Glastonbury, Hartford County, and the state of Connecticut overall.

Seven-day test positivity for Glastonbury (2.5%) has fallen from last week. Our 7-day test positivity is lower than both Hartford County (3.6%) and Connecticut overall (2.8%).

COVID-19 Vaccine

COVID-19 vaccines are available for individuals ages 6 months and up.

The Connecticut **Homebound COVID-19 Vaccination Program** will end soon.

- The online intake form will stop taking requests on Monday, June 19, 2023.
- The program will cease operations on Friday, June 30, 2023.
- If you want to schedule a home visit for vaccination against COVID-19 for yourself or a family member, [click here](#) and complete the form.

The COVID-19 bivalent booster vaccine is available if it has been at least two months since an individual's last COVID-19 vaccine (whether the primary series or any booster). More [vaccination and booster information](#) is available from the Centers for Disease Control and Prevention.

Additional clinics can be found at www.vaccines.gov and entering the zip code for the search area.

Free at home COVID-19 test kits; extended shelf life of test kits

The U.S. government still has at home test kits available to residential households for no cost. An order includes four (4) individual rapid antigen COVID-19 tests. The tests are completely free.

- Tests are currently available and can be ordered at <https://special.usps.com/testkits>
- Tests with enhanced [accessibility for blind or low vision people](#) can be ordered at <https://special.usps.com/testkits/accessible>

The expiration dates of many at home test kits have been extended. Go to [this website](#) to check the updated expiration date of kits in your home.

COVID-19 Testing locations

CLICK HERE for the 2-1-1 of Connecticut online site to search for COVID-19 testing. Users may refine their search by zip code, type of test and key demographics of individual to be tested.

Respiratory illness

Two basic types of influenza virus circulate in the U.S., flu group A and flu group B. A typical flu season starts with Flu A infections, followed by a second wave of Flu B infections. The first wave (Flu A) has peaked, and it appears we will not see a second wave (Flu B) this year. CT DPH statewide data indicates the percentage of Emergency Department visits for influenza like illness continues a downward trend with a significant drop this past week. Risk of flu in the community is minimal at this point.

Source: [CT DPH](#)

Flu shots remain available in the community. Pharmacies and other locations providing flu shots as well as the vaccines available can be found at www.vaccines.gov.

These prevention strategies can help you stay healthy regardless of illness circulating in the community:

- Wash your hands often
- Clean and disinfect surfaces regularly
- Stay home when you are sick

Data for this report is gathered from publicly available data at <https://data.ct.gov/stories/s/COVID-19-data/wa3q-tfvc/>. Test positivity is calculated as a rolling 7-day test positivity by specimen collection date; all positive molecular (PCR/NAAT) test results are divided by all molecular (PCR/NAAT) test results (positive and negative) for the last 7 days and multiplied by 100 to reach a percentage. All data are preliminary and subject to change. Data from previous dates are routinely updated. CT DPH data reporting changes have been summarized and can be read [here](#).
