Good Morning Suzanne - This email is our notification to you that we will begin the project in 48 hours, starting with pumping water from the pond to lower the water level in anticipation of breaking ground next Tuesday, June 20th, weather permitting. All the materials needed to complete this work are on site and will be transferred to the proposed staging area before we break ground. Please let us know if you have any questions. Thanks - Clint

Hi Suzanne - Pipe installation is complete and the site is stabilized. I attached some photos showing different phases of the work. Now we wait for the pond to fill up to make sure it works! Have a great long weekend. - Clint

Hi Suzanne - Actually I spoke Paul Gondek this morning and I told him I will visit this weekend or on Monday to do a final inspection. I have been to the site a number times this year, when there were large rain rainstorms, to check for erosion and found none. But they need to remove any remaining equipment and supplies from the staging area, then stabilize any disturbed areas. I will provide a written verification to you early next week and perhaps if you have time we could meet on site to take a look at the pond outlet and some the of easement issues. Let me know what your schedule is like later next week or the following week. Thanks - Clint

Hello Clint,

Have you been able to visit the site and determine that the pond is functioning as designed and without downstream erosion issues? Stipulation #6 (below) from the permit provides details.

6. The applicant's environmental consultant, Clint Webb, shall be on site to monitor and inspect the work as it is being conducted. Mr. Webb shall provide written verification when the work is completed that it was conducted accordance with the approved plan.

Please let me know the status.

Regards,

Suzanne Simone
