	ASDRC Design Guidelines Checklist					
	Other Areas					
	Design Guideline	Standard	Complies:	Comments		
	1. Site Design					
1.1	General Site Design		21 0110 0	500.81		
	To the maximum extent possible, all significant existing natural and cultural resources and scenic views shall be preserved, protected, or restored.					
1	This includes but is not limited to, stone walls, steep slopes, large boulders or ledge outcroppings, specimen trees or stands of trees, waterbodies, scenic vistas, ridgelines or other significant geological or unique site features.	Preferred				
2	Utilities shall be situated below ground and existing overhead services relocated below ground wherever feasible.	Conditional				
3	Gas station canopies shall be designed as an integral part of the station architecture.	Conditional				
4	Gas station fueling areas including pumps and canopies shall be located at the side of the lot and the associated store or station building should be located at the front of the lot.	Conditional				
5	The design of freestanding structures (such as kiosks, garages, storage units, recycling or trash enclosures, etc.) should be coordinated with the primary building through the repetition of form, materials, details and color.	Preferred				
6	The infill development of large parking lots of shopping centers that are set back from the street is encouraged.	Conditional				
1.2	Vehicular Circulation					
1	Curb cuts shall be located away from the corners of an intersection to provide safe entry and exit from the site.	Preferred				
2	Driveways that exceed 30 feet in width and are intersected by sidewalks shall incorporate pedestrian refuge islands a minimum of 5 feet wide.	Preferred				
3	Driveways shall be located to minimize conflicts with pedestrian circulation.	Preferred				
4	Driveways leading to or from drive thrus shall be designed to avoid conflicts with pedestrians. When there is potential conflict with pedestrian circulation, techniques shall be used to improve pedestrian safety and increase driver awareness such as signage, lighting, raised crosswalks, changes in paving, or other devices.	Preferred				
5	The layout and design of vehicular and pedestrian circulation, including interior drives, parking areas, and walkways shall provide for safe interior circulation and separation of pedestrian, vehicular and service traffic.	Preferred				
6	The number of curb cuts provided should be the minimum necessary to provide adequate site access. A single curb cut and driveway is preferred although secondary access may be provided from side roads.	Preferred				
7	The use of shared driveways by adjoining properties is encouraged as a means of reducing the number of curb cuts.	Preferred				
8	Curb cuts should only be as wide as necessary to accommodate needed lanes. Curb radii should be kept to a minimum.	Preferred				

r							
	Service and delivery drives, if present, should be						
9	separated from internal walkways, parking areas, or	Conditional					
	pedestrian use areas by landscaped areas or islands.						
1.3	3 Parking Areas						
	Landscaped islands that are equal in area to at						
1	least 10% of the parking lot pavement area shall be	Preferred					
	provided in parking lots with 40 or more spaces.						
	Landscaped islands and/or pedestrian access shall be						
2	provided within parking areas so as to allow no more	Preferred					
	than 20 parking spaces in a row.						
	Landscaped parking lot islands shall be a minimum						
3	of 9' in width and should be planted with shade trees	Preferred					
3	and hardy plant materials suitable for parking lot	Flelelleu					
	conditions.						
	Parking areas of commercial, mixed-use, or multifamily						
	buildings adjoining single-family residential						
4	properties or districts shall be sufficiently screened	Preferred					
4	from those abutting properties with evergreen	Plelelleu					
	trees and shrubs, earthen berms, walls, or fences a						
	minimum of four feet in height.						
1	One shade tree per 5 parking spaces should be						
1	provided within or along the perimeter of parking						
	areas. Up to 25% of this requirement may be met						
5	through the use of ornamental trees providing those	Preferred					
5	trees do not interfere with sightlines or vehicular	Preierred					
	movement when mature. The required number of						
	trees may be reduced if existing shade trees directly						
	adjacent to the parking area are preserved.						
6	Off-street parking should be located to the side or	Preferred					
0	rear of a principal building.	Flelelleu					
7	Parking should be consolidated into an area that	Conditional					
'	serves multiple buildings or establishments.	Conditionat					
	Connections between parking lots and driveways on						
8	abutting properties should be provided and parking	Conditional					
Ŭ	lots should be designed to allow for possible future	Conditional					
	connections with abutting properties.						
	Concrete or stone curbing is preferred at parking lot						
9	edges where curbing is required. Bituminous curbing	Conditional					
	is discouraged.						
Р	The location of off-street parking within the front	Prohibited					
_	yard setback is prohibited.						
1.4	Bicycle Parking						
1	Outside bicycle racks should be provided with a						
1	capacity of one bike per 5,000 square feet of building						
1	gross floor area or 10% of the number of automobile	Conditional					
<sup>-</sup>	parking spaces (whichever is greater) and should						
1	be located no more than 100 feet from the building						
<u> </u>	entrance in which the rack is intended to serve.						
1	Bicycle racks may be located within the pedestrian						
2	area of the public right-of-way provided the location	Conditional					
	does not interfere with pedestrian mobility or other						
<u> </u>	functions in that space.						
	Inverted U style bicycle racks, circular racks, or	0					
3	variants thereof are preferred over "wave" or "comb"	Conditional					
1 5	style racks.						
1.5	Pedestrian Circulation						
1	Sidewalks shall be provided along the full perimeter	Preferred					
<u> </u>	of the property along public streets.						
	Direct pedestrian access shall be provided between						
2	public sidewalks and storefront and building	Preferred					
	entrances and between parking lots and storefront						
	and building entrances.						

		1	
	Walkways shall be a minimum of five feet wide to		
	allow two people to pass comfortably. Additional		
3	width may be necessary in certain areas with	Preferred	
	heavy pedestrian traffic or where parked cars could		
	overhang the walkway.		
	Concrete, brick pavers, and other high-quality		
4		Preferred	
	materials shall be used for walkways.		
	The sidewalk materials of public sidewalks that		
5	intersect driveways near the street should continue	Conditional	
5	across driveways rather than be interrupted by	Conditional	
	driveway paving.		
	The grade of public sidewalks should be maintained		
	across driveways through the use of driveway ramps		
6	and aprons in favor of using pedestrian ramps to	Conditional	
	lower sidewalks to driveway grade.		
7	Internal walkways should be connected with	Conditional	
	walkways on abutting properties as feasible.		
	Areas adjacent to walkways should be landscaped		
8	with trees, shrubs, flower beds, ground covers, or	Preferred	
	comparable materials as space permits.		
Р	The use of asphalt for walkways is prohibited.	Prohibited	
-		Tomoteu	
1.6	Outdoor Spaces	1	
1	The front yard between a public sidewalk and		
1	building shall be landscaped or occupied by highquality	Preferred	
	outdoor gathering spaces.		
	A consistent design palette of materials shall be used		
2	across outdoor gathering spaces.	Preferred	
	Outdoor seating areas shall be protected and		
3	separated from parking areas by curbs, low fences,	Preferred	
	stone and masonry walls, or plantings a minimum of		
	three feet in height.		
4	Decorative trash receptacles shall be provided where	Droforrad	
4	waste disposal is likely to occur.	Preferred	
	Functional open spaces such as patios, courtyards,		
5	or plazas should be provided in association with new	Conditional	
Ŭ	development.	Conditional	
6	Outdoor spaces should be positioned to make best	Conditional	
	use of sun or shade.		
7	The scale of outdoor areas should be commensurate	Conditional	
'	with the scale of adjacent buildings.	Conditional	
	Outdoor gathering spaces should be designed so that		
	adjacent buildings have windows, terraces or other		
8	features that provide a visual connection between the	Conditional	
1	building tenants and the open space.		
<u> </u>	Where plazas and outdoor gathering spaces are	╂───┤	
_		Condition	
9	provided, walkways should be directed through	Conditional	
L	those spaces to activate the spaces.	ļļ	
10	Public seating, planters, and low walls should be	Conditional	
10	used to define outdoor public gathering spaces.	Conditional	
	Focal elements such as sculpture, fountains, and civic		
11	art should be included in outdoor gathering areas	Conditional	
1	where appropriate.	Conditional	
<u> </u>	Vacant public spaces that lack amenities such as	+	
D		Discouraged	
L	seating, public art, or landscaping should be avoided.	0.1	
1.7	Landscaping		
	Existing mature trees shall be preserved as feasible		
Ι.	and incorporated in the site design. If removed, trees		
1	should be replaced with specimens of comparable	Preferred	
1	species.		
		Durft	
2	Foundation plants shall be provided.	Preferred	
3	Ground covers such as grass and plantings shall be	Preferred	
	used for large unprogrammed areas.	rielelleu	
		••	

4	Hardy plant species that are native to the region shall	Preferred		
-	be included in landscaping.	Treferred		
5	Landscaping shall be used to screen unsightly areas.	Preferred		
	Landscaping within the front yard should			
~	include shade trees and should be designed and	O and it is a set		
6	programmed to maintain the visual and pedestrian connection between the street and building entrance	Conditional		
	or storefront.			
	Plantings, fences, walls, earthen berms, and other			
7	screening elements should be similar in form, scale	Preferred		
	and appearance to other similar elements on the site.			
	Low impact development strategies such as rain			
8	gardens should be used to reduce stormwater runoff.	Preferred		
~	The use of irrigation systems should be minimized in	Droformond		
9	favor of the use of hardy native plant materials.	Preferrerd		
	Trees should be selected and planted to maximize			
	shade in summer months and access to sunlight			
10	in the winter particularly with respect to outdoor	Preferred		
	gathering spaces and along south facing building			
	facades. Extensive area of mulch shall not be used as a			
D	substitute for vegetative ground covers.	Discouraged		
	The planting of invasive species (as identified by			
Р	the Connecticut Invasive Plant Working Group) is	Prohibited		
	prohibited.	Trombited		
1.8	Fences & Walls			
<u> </u>	Fences and walls shall be designed and located to			
1	avoid barriers to pedestrian circulation.	Preferred		
2	Fences and walls shall not exceed 4 feet in height in	Preferred		
2	any front yard.	Fleielleu		
	Fences and walls should be used to visually reinforce			
3	a space, add a decorative element, or provide	Preferred		
	screening. Low fences and walls should be used to provide			
	street edge definition where a building is			
4	significantly set back from the roadway or to define	Conditional		
-	large areas in front of a retail building used for	Conditional		
	dining or other programming.			
-	White fences that are at least 50% open are preferred	Conditional		
5	for fences.	Conditional		
6	Stone walls are preferred for walls.	Conditional		
Р	The use of chain link fence, metal mesh fence, or	Prohibited		
	highway guardrails is prohibited.		ļ	<u> </u>
1.9	Service Areas All service areas including waste collection and	1		
1	storage facilities, loading and unloading areas,			
1	loading docks, storage facilities, dumpsters,			
1	recycling areas, fueling areas and vehicle service and	Preferred		
1	maintenance areas shall be located at the side or rear	riciciidu		
	of the principal building and out of direct site from			
	public sidewalks.			
	Where a service area may be visible from a street or			
	public sidewalk, the service area shall be screened			
	with a wall that is comparable in or complementary			
2	to materials and design of the adjacent building	Preferred		
1	facade. Service areas visible from main entrances,			
	abutting neighborhoods, public open spaces, and			
	walkways shall be screened through the installation			
-	of a wall, fence, or plantings.	2 Building C	riontation	nd Massing Guidalinas
2.4	Puilding Orientation & Massing	2. Building C	mentation al	nd Massing Guidelines
12.1	Building Orientation & Massing			

	Large buildings shall be designed with smaller			
1	distinct masses consistent with the scale of	Conditional		
	traditional buildings in the Town Center.			
	The height of large buildings shall be varied through			
2	breaks in the roof line or through varying the	Conditional		
	number of stories.			
	Most of a building should be placed at the front of			
	the lot to maximize front façade exposure to the			
3	public. The front façade should be kept parallel to	Conditional		
	the street.			
	Buildings on corner lots should be located and			
	designed with as much mass near the intersection as			
4	possible to help anchor the lot and take advantage of	Conditional		
	the high visibility.			
	A complex of smaller buildings is preferable to a			
5	single large structure.	Conditional		
	For sites with multiple buildings proposed, efforts			
	should be made to vary the footprint among the			
6	building forms to minimize the overall sense of mass	Conditional		
	of the collective buildings.			
	The height of a portion of a new building directly			
7	adjacent to a lower structure should be designed to	Conditional		
	relate to the lower structure.	Conditional		
	The first floor should have a minimum height of 12			
8	feet and should be taller than upper floors.	Conditional		
	Upper stories may be set back to provide visual			
9	interest and to distinguish between street-level	Conditional		
	commercial uses and upper story residential uses.			
	Residential balconies should be contained within the			
10	building envelope and should not protrude beyond	Conditional		
	the building façade of lower stories.
