	ASDRC Design Guidelines Checklist					
	Upper Main Street					
	Design Guideline	Standard	Complies: (Y/N) or N/A	Comments		
		1. Site	e Design			
1.1	General Site Design					
1	To the maximum extent possible, all significant existing natural and cultural resources and scenic views shall be preserved, protected, or restored. This includes but is not limited to, stone walls, steep slopes, large boulders or ledge outcroppings, specimen trees or stands of trees, waterbodies, scenic vistas, ridgelines or other significant geological or unique site features.	Preferred				
2	Utilities shall be situated below ground and existing overhead services relocated below ground wherever feasible.	Preferred				
3	Gas station canopies shall be designed as an integral part of the station architecture.	Conditional				
4	Gas station fueling areas including pumps and canopies shall be located at the side of the lot and the associated store or station building should be located at the front of the lot.	Conditional				
5	The design of freestanding structures (such as kiosks, garages, storage units, recycling or trash enclosures, etc.) should be coordinated with the primary building through the repetition of form, materials, details and color.	Preferred				
6	The infill development of large parking lots of shopping centers that are set back from the street is encouraged.	Preferred				
1.2	P. Vehicular Circulation	•				
1	Curb cuts shall be located away from the corners of an intersection to provide safe entry and exit from the site.	Preferred				
2	Driveways that exceed 30 feet in width and are intersected by sidewalks shall incorporate pedestrian refuge islands a minimum of 5 feet wide.	Preferred				
3	Driveways shall be located to minimize conflicts with pedestrian circulation.	Preferred				
4	Driveways leading to or from drive thrus shall be designed to avoid conflicts with pedestrians. When there is potential conflict with pedestrian circulation, techniques shall be used to improve pedestrian safety and increase driver awareness such as signage, lighting, raised crosswalks, changes in paving, or other devices.	Preferred				

_			Ť	
	The layout and design of vehicular and pedestrian			
	circulation, including interior drives, parking			
5	areas, and walkways shall provide for safe interior	Preferred		
	circulation and separation of pedestrian, vehicular			
	and service traffic.			
	The number of curb cuts provided should be the			
	minimum necessary to provide adequate site access.			
6	A single curb cut and driveway is preferred although	Preferred		
	secondary access may be provided from side roads.			
	The use of shared driveways by adjoining properties			
7	is encouraged as a means of reducing the number of	Preferred		
′	curb cuts.	110101104		
	Curb cuts should only be as wide as necessary to			
8	accommodate needed lanes. Curb radii should be	Preferred		
ľ	kept to a minimum.	Tielelieu		
	Service and delivery drives, if present, should be			
9	separated from internal walkways, parking areas, or	Preferred		
"	pedestrian use areas by landscaped areas or islands.	i iciciicu		
1 2			<u> </u>	
1.3	Parking Areas			Г
_	Landscaped islands that are equal in area to at	Ductous: -1		
1	least 10% of the parking lot pavement area shall be	Preferred		
<u> </u>	provided in parking lots with 40 or more spaces.			
	Landscaped islands and/or pedestrian access shall be			
2	provided within parking areas so as to allow no more	Preferred		
	than 20 parking spaces in a row.			
	Landscaped parking lot islands shall be a minimum			
3	of 9' in width and should be planted with shade trees	Preferred		
	and hardy plant materials suitable for parking lot			
	conditions.			
	Parking areas of commercial, mixed-use, or multifamily			
	buildings adjoining single-family residential			
	properties or districts shall be sufficiently screened	_		
4	from those abutting properties with evergreen	Preferred		
	trees and shrubs, earthen berms, walls, or fences a			
	minimum of four feet in height.			
<u></u>	,			
	One shade tree per 5 parking spaces should be			
	provided within or along the perimeter of parking			
	areas. Up to 25% of this requirement may be met			
5	through the use of ornamental trees providing those	Preferred		
ľ	trees do not interfere with sightlines or vehicular	i ioioiicu		
	movement when mature. The required number of			
	trees may be reduced if existing shade trees directly			
	adjacent to the parking area are preserved.			
6	Off-street parking should be located to the side or	Preferred		
0	rear of a principal building.	rielelleu		
7	Parking should be consolidated into an area that	Droforrad		
L'	serves multiple buildings or establishments.	Preferred		
	Connections between parking lots and driveways on			
0	abutting properties should be provided and parking	Drofores		
8	lots should be designed to allow for possible future	Preferred		
	connections with abutting properties.			

Concrete or stone curbing is preferred at parking lot edges where curbing is required. Bituminous curbing is discouraged. P The location of off-street parking within the front yard setback is prohibited. 1.4 Bicycle Parking Outside bicycle racks should be provided with a capacity of one bike per 5,000 square feet of building gross floor area or 10% of the number of automobile parking spaces (whichever is greater) and should be located no more than 100 feet from the building entrance in which the rack is intended to serve. Bicycle racks may be located within the pedestrian area of the public right-of-way provided the location does not interfere with pedestrian mobility or other functions in that space. Inverted U style bicycle racks, circular racks, or variants thereof are preferred over "wave" or "comb" style racks. 1.5 Pedestrian Circulation Sidewalks shall be provided along the full perimeter of the property along public streets. Direct pedestrian access shall be provided between public sidewalks and storefront and building entrances and between parking lots and storefront and building entrances. Walkways shall be a minimum of five feet wide to allow two people to pass comfortably. Additional width may be necessary in certain areas with heavy pedestrian traffic or where parked cars could overhang the walkway. The sidewalk materials of public sidewalks that intersect driveways near the street should continue

4	pedestrian area of the right-of-way along the	Conditional	
	perimeter of a property.		
	Lighting should complement the intended use of a		
5	building by highlighting signage and entrances.	Preferred	
	Mixed lighting sources such as display window		
	lighting, sign lighting, entranceway lighting, and		
6	vehicular area lighting should be designed and used	Preferred	
	as components of a single system.		
-	The minimum level of luminescence needed to		
7	achieve visibility, comfort, and safety for vehicular	Preferred	
′		Pielelieu	
	and pedestrian traffic should be used.		
8	Lower intensity distributed light sources should be	Preferred	
-	used instead of single higher intensity fixtures.		
	Walkway lighting should directly illuminate the		
9	walkway with enough peripheral distribution to also	Preferred	
	illuminate the immediate surroundings.		
	Parking area light fixtures should be decorative and		
10	the poles supporting those fixtures should be located	Preferred	
110		Treferred	
	within raised planting areas or behind curbs.		
4.4	The color temperature of light fixtures should be	Duefermed	
11	3,000K or less.	Preferred	
	The placement of parking lot light poles on raised		
D	concrete bases within parking lot pavement is	Discouraged	
	discouraged.		
D	The use of box or cobra head lighting is discouraged.	Discouraged	
D	Flashing or color changing lights are prohibited.	Prohibited	
4.2		Fioribited	
4.2	Sign Location & Scale	1	T
1	Multiple sign types and locations with a common	Preferred	
-	theme are preferable to a single larger sign.		
	Signs should be located in consideration of the		
2	rhythm and scale of other signs in the area to avoid	Preferred	
	conflict and visual clutter.		
	Signs should be scaled to the immediate audience.		
3	Different signs for vehicular and pedestrian traffic	Preferred	
	are encouraged.		
D	Bright sign background colors, including large white	Discouraged	
L	areas, should be avoided.	Discouraged	
r	Signs shall not project above the façade of any	Drobibited	
1	building.	Prohibited	
4.3	Wall Signs	-	
	If used, wall signs shall be designed as an integral		
	element of the architecture. The shape and materials		
1	of the sign should complement the architectural	Preferred	
-	features on the building.		
1_	For buildings with multiple storefronts, wall signs,		
2	if used, shall be centered on structural elements that	Preferred	
	define an individual business.		

	If your wall gigns should be leasted within the friend				
	If used, wall signs should be located within the frieze	5 (
3	of the cornice, on a covered transom, or on another	Preferred			
-	flat and unadorned surface.				
Р	Wall signs shall not obscure any trim or other facade	Prohibited			
	details.				
4.4 Ground Signs					
1	Landscaping shall be used to complement ground	Preferred			
	signs and blend them into the surrounding area.				
	Ground sign structural supports and exposed				
	foundations should be constructed of or veneered				
2	with stone, brick, heavy gauge metal, or wood and	Preferred			
	should be designed as an integral or complementary				
-	component of the sign panel.				
	Ground signs should be oriented perpendicularly to				
	the street, within the cone of vision of drivers on the				
3	adjacent roadway. Signs may be oriented parallel to	Preferred			
	the street if the sign is sufficiently setback from the				
_	roadway.				
D	The use of top-heavy, pole-mounted, ground signs	Discouraged			
	should be avoided.				
4.5	4.5 Overhang Signs				
1	Overhanging signs shall be scaled and oriented to	Preferred			
_	pedestrians.				
	Overhanging signs shall have a minimum of 7 feet				
2	clearance between the sign and areas accessible to	Preferred			
	pedestrians below.				
3	An overhanging sign shall project no more than four	Preferred			
Ľ	feet from the building to which it is attached.				
	An overhanging sign shall not project above the				
	cornice line of the building or above the sills of	Prohibited			
	second story windows if present.				
4.6	4.6 Window Signs				
	Window signs, as permitted within the total				
1	sign allowance established by the Building Zone	Preferred			
	Regulations, shall not cover more than 25% of the	riciciica			
	total window area of retail windows.				
2	Window signs should be scaled for and oriented	Preferred			
Ĺ	towards pedestrians.	110.01100			
P	Directly lit window signs such as neon signs or signs	Prohibited			
Ŀ	with integrated LED lighting are prohibited.				
4.7	4.7 Sign Lighting				
1	Gooseneck, sconce, pendant, and letter halo lighting	Preferred			
Ļ	styles may be used for illuminating signs.				
	Light fixtures for externally lit signs should				
2	complement the color and design of the sign and the	Preferred			
<u></u>	architecture of the building.				
	The illumination level on the surface of externally				
3	lit signs should be bright enough to render the sign				
	legible and provide a noticeable contrast with the	Preferred			
	surrounding building or landscape without causing				
	excessive glare or reflection.				
P	Internally lit translucent plastic signs and flashing	Prohibited			
Ľ.	signs are prohibited.	ombited
